

mySmartSimulations® , Inc., Introduces Custom Handedness Training Solutions to the Interface of Worldwide Interactive Learning Designer (WILD) this Fall

Saratoga Springs, NY - September 30, 2006 - mySmartSim, a pioneer since 2001 in providing companies with custom interactive simulation and chapter-based courses, announced today their plans to include haptic functionality as part of their healthcare training offerings. This fall mySmartSim will provide highly interactive training experiences launched from cognitive courses. The learner will experience the ability to feel depth, texture and the virtual navigation of instrumentation.

"For several years we have been providing a cognitive learning model for the masses. Today we will be one of the first companies to develop a model that blends both cognitive and haptic learning. For example, imagine the ability to actually *feel* the process of a simulated surgery from the very first incision, or to virtually place a surgical instrument in the required location during a training exercise, while feeling force feedback along the way. This technology has become financially reasonable, making this a very realistic opportunity," said William Cornelius, President and CEO, mySmartSimulations, Inc.

Our authoring tool, WILD, has allowed significant growth in functionality and usability. Our customers are now asking for a physical or haptic experience, which will take our training solutions to a whole new level," said Christopher O'Brien, Director of Research and Development, mySmartSimulations, Inc.

About mySmartSimulations® , Inc.

mySmartSim has developed an application, Worldwide Interactive Learning Designer (WILD), for creating custom interactive simulation and chapter-based courses. This authoring tool allows them to develop truly interactive learning experiences resulting in reduced liability and training costs, as well as increased retention and productivity. mySmartSim currently uses WILD to design high quality, intuitive dynamic courses and presentations for some of the largest companies in the world. WILD has allowed mySmartSim, Inc. to reduce the overall cost and development time of producing highly interactive custom training. mySmartSim is now offering this application to developers and customers worldwide to do the same.
